

Proteomics Education, an important challenge for the Scientific Community

Concha Gil

Department of Microbiology, Faculty of Pharmacy, Complutense University, Madrid, Spain

After the Munich meeting on August 29, 2005, where the European Proteomics Association (EuPA) was formally inaugurated and the coordinators for the different EuPA activities were elected (Kleinhammer and Corthals, 2005), we started working on the important issue of education. Our first step was the creation of an Education Committee (EuPA-EC) composed of scientists with experience in proteomics R&D and education-related fields (www.eupa.org).
